

## Blade Maintenance

---

The Blade frameless skylight is essentially a fit and forget product. Only world class materials are utilised to manufacture the Blade and it comes with a lifetime guarantee. Just a little bit of 'love' and the blade will remain stunning aesthetically for decades to come. The Easy Clean coating on the glass and the powder coated aluminium frames need very little maintenance.

Ofset recommend a minimum six monthly cleaning routine for both the glass and aluminium frame to keep your Blade looking in pristine condition.

Clean both exterior and interior of the Blade using a specialist glass cleaning product or good old fashioned warm water/detergent and a sponge and/or soft cloth. If there is heavy soiling of the glass, white spirit should be used. But this will be very rare. Do not use abrasive cleaning materials.

Please be careful cleaning the inside of the glass. We recommend using a window cleaner to clean the inside of the rooflight who is familiar with high level glass cleaning and will have suitable equipment to reach the glass safely.
